KEUCO hygiene accessories with technical features

Equipped with sensor, the PLAN dispenser offers superior ease-of-use and optimum hygiene

The impressive thing about KEUCO products is their excellent design, ease-of-use, and technical sophistication. Innovations that ease daily living – visually appealing and technically superb. The KEUCO assortment has a wealth of accessories for daily hygiene.

The revolution: For both liquid or foam soap as well as liquid sanitiser, a sensor-activated dispenser was developed with aesthetic appeal and innovative technology. All dispensers have the same universal design and offer a range of technical features.

The wall-mounted, electronic PLAN sensor dispenser made by KEUCO combines a sophisticated look with state-of-the-art hygiene convenience. The hygiene fluid can be filled directly into the generous 1.1-litre container, no matter who the producer is. This saves a number of manual operations in everyday life and is an important argument, especially in buildings such as hotels or healthcare facilities.

The KEUCO touch-free sensor dispenser in chrome, aluminium, stainless steel finish or modern matt black, complements the extensive range of accessories in the PLAN series. The PLAN range offers many different solutions for private and hotel bathrooms as well as public sanitary areas. With its sophisticated aesthetics, maximum functionality and outstanding quality, the PLAN range has become a sought-after modern classic among architects, planners and plumbers.

The user-friendly operation is via a sensor that triggers the dispensing of a preset amount when the hand is held underneath. Adjustable portion quantities of liquid or foam soap as well as liquid disinfectant ensure economical consumption. The interval for dispensing is also adjustable.

PRESS INFORMATION

When set in the cleaning mode, the unit and the surrounding area can be cleaned for at least 10 seconds without triggering.

KEUCO offers two electronic operating options for the PLAN hygiene dispenser: via batteries or with a flush-mounted power supply unit. Both have an LED display for the fill level as well as the battery capacity. The LED fill level indicator lights up green when the device is ready for operation. It flashes red if the fluid needs refilling. The battery indicator works in the same way. A matching drip tray is available as an optional accessory for the dispenser.

The PLAN sensor dispenser is an important piece of interior design in upscale interiors where many people come together and where hygiene plays an important role.
