IXMO_solo from KEUCO – minimalism in the shower

Unique combination of single-lever mixer and hose connection

What can one expect from a shower fitting? At KEUCO, clearly quite a lot. The high-quality bathroom furnishings full supplier has now succeeded in developing a fitting that uniquely combines the single-lever mixer with the hose connection. A minimum in installation work and a maximum in convenience because all that is necessary for a complete shower solution is IXMO_solo with no further water-conducting elements required.

IXMO_solo is a genuine functional wonder: The impressive little module is characterised by its intelligent combination of innovative technology and minimalist design.

With the new member of the IXMO family, the motto "less can do more" has never been so true. The in-wall unit is extremely small and is convincing with its particularly shallow installation depth of only 65 mm, meaning that it can be installed in even thin walls or without difficulty during subsequent modernisation work. Thanks to the intelligent depth-compensation feature, it can be flexibly adjusted by any amount from 65 to 95 mm.

Since it is only necessary to install one single rough part, the installation work for the professional is extremely quick and easy: Simply install the rough part and connect up the supply lines. For the finishing touches on the installation, all that is still necessary is to mount the exposed part, and then add the hand shower, shower hose and hand shower sliding rail. With that, the shower solution is ready for use. And at quite the attractive price, too whether in your own home or at your business premises. With its noise class I ranking, IXMO_solo is also perfect for use in a multi-family unit or hotel.

But IXMO_solo has even more beneficial features in store: the water temperature and flow rate can be adjusted when needed at any time, saving energy and money. On top of that, IXMO_solo is extremely easy to clean because everything is contained in only one element on the wall.

IXMO_solo's design is also unique: With a decor disc diameter or edge length and a fixed projection all of only 90 mm, the exposed part is impressively small. The appearance is reduced even more with only one module, producing an overall picture of tidiness and clarity in the shower cubicle. The decor discs are available in either round or rectangular models, and with the universal IXMO handle, the shower fitting is at home in any bathroom.
