### **PLAN light mirror: universal genius with clever technical features**

#### **Shelf included, mirror heater optional**

The PLAN LED light mirror presents itself framed like a picture. The surrounding frame made of luxurious silver anodised aluminium doubles as a practical shelf. With its universal design, the PLAN light mirror harmonises with every style. Optionally, it comes with a mirror heater, which prevents the mirror from fogging up after a shower – an option that satisfies more demanding expectations for both the private as well as the hotel bathroom. The advanced technology of the sensor-controlled mirror heater switches off again automatically 20 minutes after being switched on.

On top of that the PLAN light mirror offers two separately switchable and dimmable light sources: a main light consisting of upper and wall lighting, and a washbasin light. When it is switched on again the intelligent electronics remember the most recent lighting scenario. Both light sources can be controlled using the unique and visually attractive sensor electronics developed by KEUCO.

The mirror is available either as a non-illuminated or an illuminated version. With the illuminated version the customer can choose between a warm-white light colour (3000 K) or a steplessly adjustable light colour ranging from warm white to daylight white (6500 K). Moreover, in every light situation the long-lasting and glare-free LED lighting is energy-saving and maintenance free. Despite the long lifespan of the LEDs of over 30,000 hours, in the unlikely case of failure, the lights can easily be replaced by a service technician. The LEDs are fastened to carrier strips, which, because of their plug connection, can be replaced. KEUCO guarantees the availability of spare parts for 10 years.

With widths of 500 mm to 1200 mm in four different equipment variations each, the PLAN light mirror offers diverse options for a variety of needs and furnishing designs.
