KEUCO ROYAL REFLEX.2: The mirror cabinet and the light mirror with new brilliance

State-of-the-art LED technology and a new light source create a special atmosphere in the bathroom

"Making good even better" – A motto that suits KEUCO's ROYAL REFLEX.2 mirror cabinet and light mirror perfectly. The successful models have now been enhanced with the most innovative technology and impress with new features.

To achieve the most pleasant lighting, the conventional lights had to give way to state-of-the-art LED technology. The LEDs emit a warm-white and particularly cosy light of 3000 Kelvin and offer a lifespan of a considerable 30,000+ operation hours. In addition to the front illumination across the entire width, both the ROYAL REFLEX.2 mirror cabinet as well as the light mirror now have an additional light source: By illuminating the washbasin, the fitting is highlighted in a particularly attractive way. For models of 1300 mm and higher with twin washbasins there are LED lights for two fittings.

And if that wasn't enough, KEUCO has even more in store: The KEUCO rotary dimmer has now replaced the rocker switch. Fixed to the underside of the body, it can be used to switch between three different lighting modes and also to dim the light intensity. A short press of the dimmer switches the lighting on and off. When the light is switched on, holding down the rotary dimmer longer causes it to toggle between the three lighting modes. In the first lighting mode the washbasin is illuminated. In the second mode the upper lighting of the mirror cabinet or the side-lighting of the light mirror is illuminated. In the third and final mode both of the light sources are switched on together. Rotating the dimmer regulates the intensity of the light.

KEUCO's ROYAL REFLEX.2 mirror cabinet and light mirror are extremely flexible because the models are available in five sizes ranging from 500 to 1300 mm. Depending on the width, the mirror cabinet is available with one, two or three doors that have mirrors on both sides.
